

Communication Awareness for Mobile Phones

SymPA for Symbian 9 is now available in Software section!!!

[SymPA v1.0 for Symbian 9](#)

Welcome to the web site of the Wireless Communications and Pervasive Computing Team, member of [GISUM \(Software Engineering Group of the Málaga University\)](#) in [University of Málaga](#).

We focus on designing and implementing middleware for wireless communication awareness that analyzes:

- new communications protocols in mobile environments,
- correlation between mobility events (such as handover and roaming between different radio-access technologies) and communication performance,
- metrics for benchmarking communications in mobile applications, and
- security weaknesses and malicious applications in mobile devices.
